**GETECH Delivers Large Format PCB Router GSR 1290**

**SINGAPORE — September 2015** — GETECH, the worldwide leader in PCB automation and depaneling, is pleased to deliver a large format depaneling machine to a Tier 1 CEM for one of its facilities in Asia. The machine is capable of handling extremely large PCBs with very heavy construction (up to 8 mm thick).

"The machine offers a very high accuracy capability necessary when cutting high value PCBs," Commented Leon Tjipto, CEO at Getech. "Such machines are not common in the industry but we have been building for this market for a number of years and continue to be impressed by the sheer scale of the PCBs being manufactured within these facilities and are pleased to be a part of the solution."

**About GETECH**

**Getech Automation** was established in 1992 to focus on developing and manufacturing machines and systems to meet key needs of the PCBA and Semi-conductor industries. Today, Getech has evolved to become a major producer of machinery and automation systems used by PCBA and Semiconductor companies. Every machine and system delivers the highest degree of productivity while ensuring product quality and integrity. However, Getech's expertise extends beyond the world of electronics to include systems delivered to governmental agencies and corporate clients involved with Pharmaceutical delivery and munitions manufacture. Getech is certified as a **Quality Standard ISO 9001:2008** company and has experience building machines to meet both CE and SEMI standards.
